

## Sample Design of the Spanish EU-SILC

- SSU Dwellings
- 10 dwellings per PSU
- Dwellings taken from Continuous Population Register

3

# EU-SILC Methodological Workshop

(Helsinki, 7-8 November 2006)

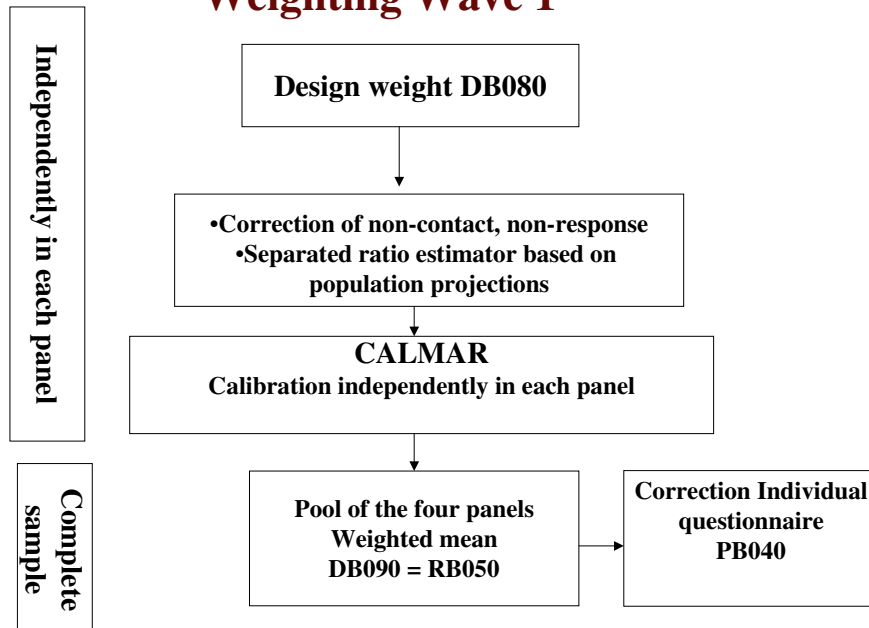

The Spanish experience in the calculation of the cross-sectional weights of waves 1 and 2 of EU-SILC

Alejandro Salinero

INE- SPAIN

## Weighting Wave 1

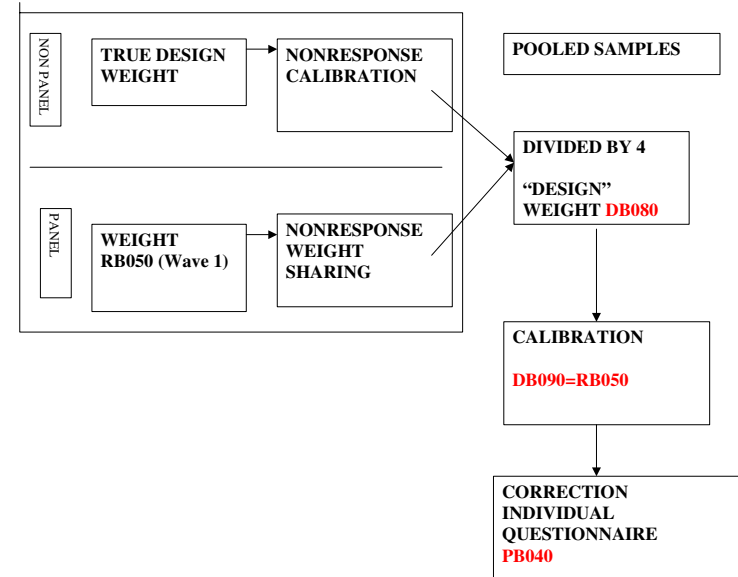

4

## Sample Design of the Spanish EU-SILC

- Common Eurostat Framework
- Four rotation groups = panels
- Two stage stratified sample of dwellings
- PSU 2.000 Censal Sections
- Stratification according to the size of municipality

2

## Weighting Wave 2

5

## Calibration

- Integrated calibration of persons and households
- CALMAR
- Logit method with bounds in the variation of the weights
- Independent calibration among panels the first wave
- Groups of age sex not the same in all NUTS 2 regions, Population projections
- Distribution of size of households based on LFS
- Also by nationality ?
