

## Country report on PC-AXIS in Basque Country 2007

EUSTAT  
Vitoria-Gasteiz 29<sup>th</sup> August 2007

### **1. Pc-Axis use in EUSTAT**

Since Eustat decided the use of Px-Web software for the data bank on the internet, Pc-Axis has to play an important role in the improvement of data dissemination.

Pc-Axis software is available for all the staff in Eustat, about 100 people. The latest version in use is Pc-Axis 2005.

We have installed Px-Web for the data bank. It is the software providing data on-line, free for charge in our web site.

### **2. On-line Data Bank**

Eustat offers px-file with px-web through the internet. At the moment there are more than 1500 different px files, containing time variable.

The retrievals from the data-bank have gone on increasing. Once the users realise that px-web gives them better data retrieval options than plain excel files, they keep px-web as their preferred tool.

The main effort for the last year has been the english version of the Data-Bank. From the early days of the Data-Bank, there were both basque and spanish language versions. That means that they were two different px-files. At that time there was no multilingual version of px files and our data producing application, similar to px-sql was ready to produce three languages at the same time. This year, we have launched the english version with all the english files. The use of the multilingual option remains for the future and now we have three different px-files for each table.

### **4. Px-web sites in the Basque Country**

Four px-web sites are working in our area now:

-EUSTAT. Now also available in english.

<http://www.eustat.es/bancopx/english/indice.asp?tipo=N>

-The basque government culture department has launched their new web site for its Basque Language Secretary. EAS is the Language Indicator System.
