

## New orders in manufacturing

2015, September

# New orders in manufacturing fell by 30.6 per cent year-on-year in September

According to Statistics Finland, the value of new orders in manufacturing was 30.6 per cent lower in September 2015 than twelve months earlier. The fall is largely explained by the exceptionally high value of new orders in the corresponding time period of the previous year, generated by, for example, a few large orders in the shipbuilding industry. During January to September, orders grew by 3.4 per cent year-on-year.

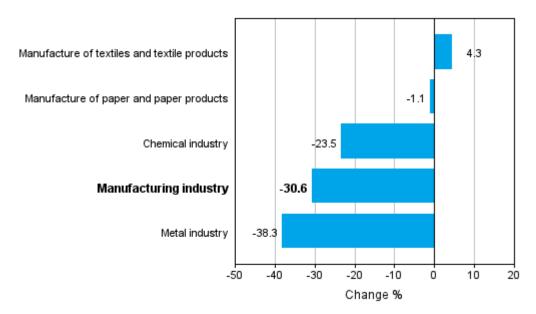

#### Annual change in new orders in manufacturing (orginal series), % (TOL2008)

Enterprises received more orders than twelve months ago in September only in the textile industry, where orders increased by 4.3 per cent year-on-year. In other manufacturing industries, the value of orders was lower than in the year before. In the metal industry, new orders decreased by as much as 38.3 per cent compared to the previous year. In the chemical industry, orders declined by 23.5 per cent and in the industry of the manufacture of paper and paper board products by 1.1 per cent from one year ago.

When interpreting these statistics, it should be borne in mind that they typically show strong fluctuations by month. Even new orders of substantial value are not examined over extended time periods but for the statistical reference month only.

#### Change in new orders in manufacturing 9/2014-9/2015 (TOL2008)

The index of new orders in manufacturing describes development in the value of new orders received by enterprises for commodities and services that are meant to be produced by establishments located in Finland. These statistics are based on non-probability sampling, in which the basic observation unit is an enterprise or a kind-of-activity unit. The sample comprises monthly 400 to 450 enterprises or their kind-of-activity units. Index point figures and annual change percentages are published monthly for five industry categories. The time series start from January 2005 and their base year is 2010 (2010=100). The index figures may become slightly revised as new data accumulate and enterprises report changes to their data. Due to supplementations, the latest 12 months are revised in the releases. A detailed description of the statistics and the calculation method are included in the quality description on the home page of the statistics.
