

## Naturalized foreigners

### Number of persons receiving Finnish citizenship grew slightly in 2007

According to Statistics Finland, Finnish citizenship was granted in 2007 to 4,800 foreign citizens permanently resident in Finland. The number was 400 higher than in 2006. Of the persons receiving Finnish citizenship, 2,750 were women and 2,100 men. Of the persons receiving Finnish citizenship, 1,350 were younger than 15 years of age and 200 were older than 65.

Last year 4,300 citizens of countries not belonging to the European Union were granted Finnish citizenship, which is 400 more than in 2006. The number of citizens of countries belonging to the European Union among those who received Finnish citizenship was the same as one year previously (500).

Finnish citizenship was most often granted to citizens of Russia (1,650) and Somalia (460). The third largest group of recipients of Finnish citizenship was made up of citizens of Iraq (440).

## *Quality description, naturalized foreigners*

### *1. Relevance of statistical information*

The main source used when producing Finnish population statistics is the Population Information System of the Population Register Centre. Changes in the data on the vital events of the resident population are updated into the Population Information System continuously by local population register authorities. From 1975 Statistics Finland has obtained population data from the Population Register Centre.

The last population registration was carried out in Finland on 1 January 1989. After that the Population Information System has been updated by notifications of changes. The data stored in the Population Information System are specified in the Population Information Act (11 June 1993/507).

Statistics Finland's function is to compile statistics on conditions in society (Statistics Finland Act of 24 January 1992/48). These also include demographic statistics. Statistics Finland's Rules of Procedure defines the Population Statistics unit as the producer of demographic statistics (Statistics Finland's Rules of Procedure, TK-00-1458-07).

In accordance with the Act on the Municipality of Domicile, the municipality of domicile and the place of residence of individuals are recorded in the Population Information System. The municipality in which a person lives or the one construed by the inhabitant as the municipality of domicile on the grounds of residence, family ties, livelihood or other equivalent circumstances, or to which the inhabitant has close links due to the aforementioned circumstances is deemed the municipality of domicile. (Act on the Municipality of Domicile, 201/1994.) The population registered in the Population Information System is divided into those present and those absent. Those present are permanent residents of Finland, either Finnish nationals or aliens. Those absent are Finnish nationals who when emigrating from the country have reported that they intend to be absent from Finland for more than one year, with the exception of Finnish nationals who are diplomats and those working in development co-operation (Act on the Municipality of Domicile, 201/1994.) Only changes in the population resident in Finland on 31 December are taken into account when compiling statistics on vital events. Persons moving to Finland from abroad are classified in the population statistics if the place of residence they have declared as their municipality of domicile is later confirmed as their place of residence.

### *Citizenship*

Citizenship refers to a person's legal nationality in a certain country. Citizenship is usually determined at birth, but it may be changed upon moving to live in another country. A person may also be a citizen of more than one country (see Nationality Act, 359/2003). Persons with both Finnish and foreign citizenship will be entered in the statistics as Finnish nationals. If a foreign national living in Finland has several nationalities, that person will be entered in the statistics as a national of the country on whose passport he or she arrived in the country. Persons having received Finnish nationality by both proceedings initiated upon petition and by declaration procedure are included in statistics on recipients of Finnish nationality.

The Population Register Centre has adopted the ISO 3166 standard in its nationality classification.

### *2. Methodological description of survey*

Each parish in the Evangelical-Lutheran and Greek Orthodox churches maintains a population register; in addition, the register office of each jurisdictional district maintains a register of the members of other religious bodies and of those with no religious affiliations. Data recorded in the population registers of the jurisdictional districts and parishes are transferred daily to Population Register Centre to be updated in the Population Information System. Statistics Finland receives the updated data on vital events in machine-language format on a weekly basis.

The deadline for delivering data to Statistics Finland on vital events in the statistical year is the end of January of the following year. Data on population changes in statistical year delivered to Statistics Finland after this date are included in the data of the following year.

### ***3. Correctness and accuracy of data***

In general, the Population Information System of the Population Register Centre can be considered very exhaustive as regards persons. In order that a person obtains a personal identity code, he or she has to be registered in the Population Information System. It is practically impossible to live in Finland without a personal identity code. A personal identity code is needed so that one can work legally, open a bank account, have dealings with authorities and so on. It can be safely assumed that Finland cannot have any substantial numbers of 'moonlighters' who receive their pay in cash for periods of over one year, for example. Staying in Finland for at least one year is the prerequisite for registering into the population of Finland.

After abolishment of yearly checking of domicile registers (January 1) in 1989 the Population Information System has been maintained only by notifications of changes to population information. Their correctness is determined by a reliability survey made on the addresses in the Population Information System.

The Population Register Centre charges Statistics Finland with the task of conducting yearly a sample survey on correctness of address information. Around 11,000 people are asked whether their address in the Population Information System is correct. In the 2007 survey, the address was correct for 98.8 per cent of the respondents.

In connection with municipal elections, returned notifications of voting sent to foreigners usually reveal around 1,000 persons who have moved from the country without giving notice and are thus still included in the Finnish population. The Population Register Centre removes them from the resident population in the Population Information System before the following turn of the year.

### ***4. Timeliness and promptness of published data***

Final vital statistics are published yearly in May to June, except for those on stillbirths, which are released in September. Since 1999 the regional division used has been that of the first day of the following year. Thus the municipalities that unite on the first day of the new year are already combined in the statistics on the last day of the previous year. Information on the vital statistics of the united municipalities before the unification is available from 2003 onwards.

Preliminary population data by municipality are available by month. In addition, the publication Quarterly Population Statistics containing preliminary data is released always at the end of the month following the previous quarter.

### ***5. Accessibility and transparency/clarity of data***

Basic population data are available in electronic form by municipality or with larger regional divisions than municipality in Statistics Finland's free Statistical Database on the internet.

The chargeable information service contains more specified information about the population by sub-area of municipality, for example.

The Altika statistical service also includes municipality-specific population data from 1975 onwards.

### ***6. Comparability of statistics***

Comparable regional vital statistics series are available from 1987. The tables always indicate which regional division is used.

Compilation of statistics on immigrants based on lists of passports began in 1900 and continued until 1984. From 1945 there are data on the total volume of migration between Finland and foreign countries derived from statistical materials of other countries. The migration statistics between the Nordic Countries improved in 1969, when the so-called Inter-Nordic Migration Form was introduced. Production of statistics on migration outside the Nordic Countries improved further in 1985, when the obligation to notify was extended to emigrants.

Population data by municipality are available in electronic form in the Altika information service from 1975 onwards. The population time series in the free "Väestö" online service begin from the year 1980 or 1987. Vital statistics time series for the whole country is available from 1749.

## *7. Coherence and consistency/uniformity*

Statistics Finland's other statistics use the data of demographic statistics as basic information on population. Consequently, Statistics Finland's other statistics correspond to demographic statistics.
