

Trend Indicator of Output

2021, June

Output of the national economy grew in June

Corrected on 17 August 2021. The correction is indicated in red.

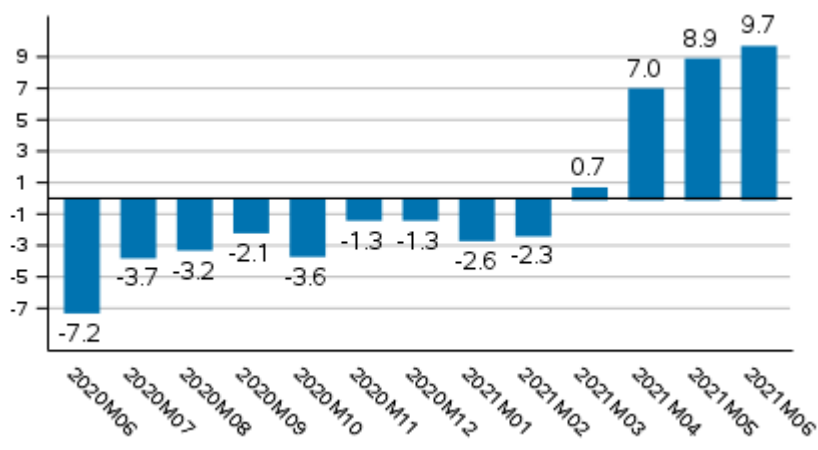

Adjusted for working days, **output** went up by 9.7 per cent in June 2021 year-on-year. In June, seasonally adjusted output grew by 0.8 per cent from the month before. According to revised data, working day adjusted output grew in May 2021 by 8.9 per cent (previously 9.0 per cent) from last year's May.

Volume of total output 2005 to 2021, trend and seasonally adjusted series

The series of the Trend Indicator of Output are seasonally adjusted with the Tramo/Seats method. The latest observations of the series adjusted for seasonal and random variation (seasonally adjusted and trend series) become revised with new observations in seasonal adjustment methods. Revisions especially at turning points of economic trends may be significant, which should be taken into consideration when using seasonally adjusted and trend data.

Working day adjusted change of total output from previous year's corresponding month, %

Working day adjusted primary production grew by around two per cent. Secondary production grew by about four per cent and services by around 13 per cent from June 2020.

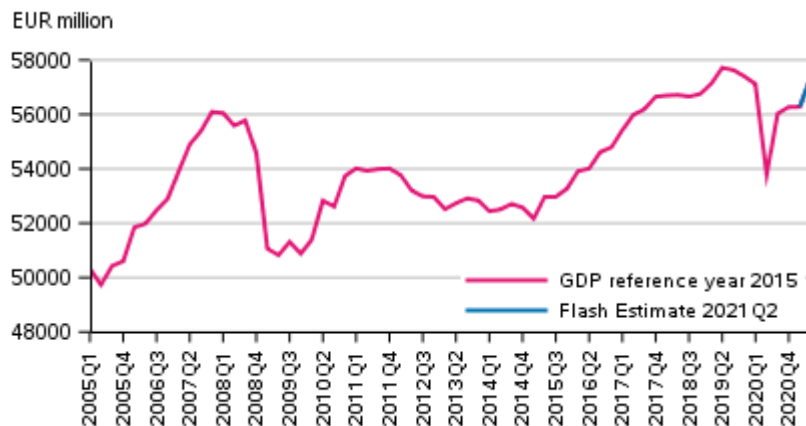

Primary production refers to agriculture, hunting, forestry and fishing. Secondary production includes manufacturing and construction. Services comprise trade, hotel and restaurant activities, transport and business activities, as well as real estate, renting and research services, financial intermediation and insurance, and public services.

GDP is estimated to have grown in the second quarter of 2021

Seasonally adjusted GDP is estimated to have grown by around 2.0 per cent from the previous quarter. According to the series adjusted for working days, GDP was 7.4 per cent higher than in the corresponding quarter of the year before. It is estimated that the number of the employed has increased by around 3.9 per cent from one year ago. Adjusted for working days, the number of hours worked has grown by around 5.4 per cent from the corresponding quarter of one year ago.

The data are based on preliminary data of the Trend Indicator of Output. The next [quarterly national accounts](#) with more detailed data will be published on 31 August 2021.

Flash estimate, seasonally adjusted, reference year 2015

The compilation of the quarterly flash estimate is based on the change in production calculated through the Trend Indicator of Output and on the estimated development of taxes on products and subsidies on products.
