Turnover in service industries

2022, January

Preliminary data: Turnover in services grew in January

According to Statistics Finland’s preliminary data, the working day adjusted turnover in service industries grew by 14.2 per cent in January 2022 compared with January 2021. The development was partly due to the exceptional situation caused by the coronavirus one year earlier. Services are here examined exclusive of trade.

Annual change in working day adjusted turnover of service industries, %

According to the preliminary data the seasonally adjusted turnover in service industries grew in January 2022 by 0.2 per cent compared to December 2021. In December, seasonally adjusted turnover grew by 0.6 per cent, while in November, turnover was 2.1 per cent higher than in the month before.
The data for the latest month are preliminary and are released at a delay of around four weeks. The data may become significantly revised in coming months.

The factors caused by the variation in the number of weekdays are taken into account in adjustment for working days. This means taking into consideration the lengths of months, different weekdays and holidays. In addition, seasonal variation is eliminated from seasonally adjusted series, on account of which it makes sense to compare observations of two successive months as well.
