

New orders in manufacturing

2015, June

New orders in manufacturing grew in June by over one half from one year ago

According to Statistics Finland, the value of new orders in manufacturing was 54.4 per cent higher in June 2015 than twelve months earlier. The strong growth is caused by a few large orders in the metal industry. During January to June, orders rose by 9.1 per cent year-on-year.

Annual change in new orders in manufacturing (original series), % (TOL2008)

New orders in manufacturing increased strongly in June. The growth was strongest in the metal industry, where the value of orders was as much as 82.6 per cent up on the year before. In the metal industry, orders increased particularly due to the large new orders in the shipbuilding industry. In the industry of the manufacture of paper and that of paper and paper board products, orders grew by 15.0 per cent year-on-year. Orders declined by 6.2 per cent in the chemical industry and by 4.0 per cent in the textile industry from the previous year.

When interpreting these statistics, it should be borne in mind that they typically show strong fluctuations by month. Even new orders of substantial value are not examined over extended time periods but for the statistical reference month only.

Change in new orders in manufacturing 6/2014– 6/2015 (TOL2008)

The index of new orders in manufacturing describes development in the value of new orders received by enterprises for commodities and services that are meant to be produced by establishments located in Finland. These statistics are based on non-probability sampling, in which the basic observation unit is an enterprise or a kind-of-activity unit. The sample comprises monthly 400 to 450 enterprises or their kind-of-activity units. Index point figures and annual change percentages are published monthly for five industry categories. The time series start from January 2005 and their base year is 2010 (2010=100). The index figures may become slightly revised as new data accumulate and enterprises report changes to their data. Due to supplementations, the latest 12 months are revised in the releases. A detailed description of the statistics and the calculation method are included in the quality description on the home page of the statistics.
