

# Government R&D funding in the state budget 2018, final data

## Final government R&D funding in the state budget for 2018

In the 2018 state budget, a total of EUR 1,951.0 million were budgeted for research and development, which is EUR 67.8 million more than the funding published in the preliminary data.

Based on the previously published and preliminary data, research funding would have grown from 2018 to 2019 by EUR 107.9 million, but as the funding data for 2018 became revised, the growth from 2018 to 2019 is EUR 40.1 million.

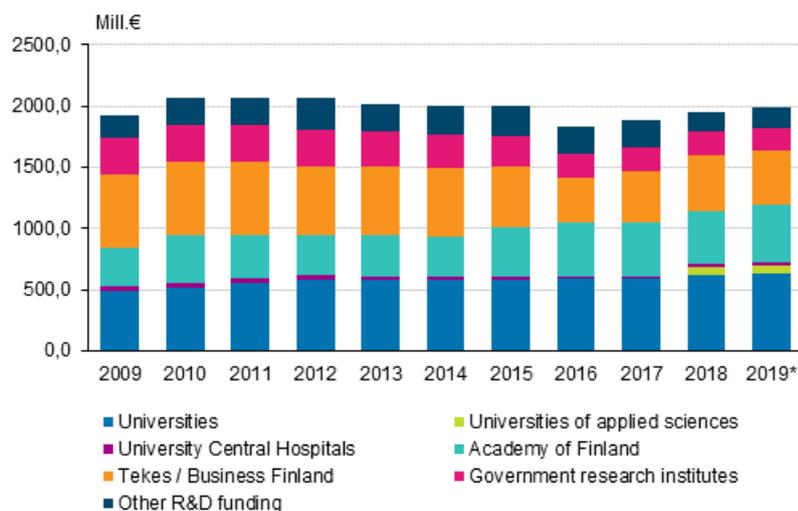

### Government R&D funding by socioeconomic objective in 2018 to 2019

\*data may become revised based on supplementary budgets

Due to these updates, the appropriations for research and development in the state budget for 2019 are estimated to grow most in the objective category General advancement of knowledge. A majority of the objective category funding consists of the Academy of Finland’s R&D appropriations. On the other hand, R&D funding of the socioeconomic objective Industrial production and technology, which includes, for example, technology development, is expected to decrease in the 2019 budget.

### Government R&D funding by organisation in 2009 to 2019

\*data may become revised based on supplementary budgets.

Preliminary data on budget funding for R&D will be published on the basis of the autumn’s budget proposal. Preliminary figures are partly based on the forecast, which is made based on the plans and the current year's budget outturn at that moment, and even major changes in the final budget data are thus possible. The use of the current year's outturn in the forecast gives outlines for the forecast, but it is difficult to know actual changes in funding more exactly in advance. In addition, because it is often possible to grant both R&D and innovation activity funding from the same item, this division may make it difficult to form preliminary figures for some respondent organisations. Plans may well change after the preliminary figures have been published, so there is always uncertainty involved in preliminary figures.

The revised figures for 2018 can be found in the database tables.
